Kosmo Machine Inc. News Release

For immediate release

Sandston, VA September 4, 2020 ... Kosmo Machine Inc. today announced the acquisition of a Mazak i700T VariAxis machining center. This purchase enables the company to double capacity and decrease lead-time of highly complex machine parts and custom molds requiring 5-axis technology. With a maximum work piece size of 33.5" diameter x 20" long and weighing up to 1543 pounds, it accommodates most mid-size applications while adding value with multi-tasking abilities. Advanced software permits conversational programming (without external CAD/CAM software) of intricate shapes such as helical pinion gears.

Our company has grown to be a leading regional manufacturing firm with a valued customer base and a team of dedicated and, talented employees who are instrumental in maintaining company sustainability and achieving growth potential”, said Mike Redden, President. “We pride ourselves on our effective recruiting process coupled with developing individual training plans to maximize career opportunities for all teammates

at our employee owned company (ESOP).

The company's nationally recognized apprenticeship program is a vital component of Kosmo Machine's 10- year growth program and the development of advanced machinist skills and specialized capabilities.

"By expanding our capabilities with advanced equipment and adhering to a progressive business model, we know we'll continued to attract and develop the best talent within the Commonwealth", continued Redden.

Established in 1976, Kosmo Machine Inc. is a contract manufacturer of precision machine components and a specialized service provider to the energy, aerospace, defense and packaging industries.

The company relocated in 2013 to a 62,500 sqft. climate-controlled facility near Richmond International Airport that, together with a significant investment in production equipment and integrated career development programs, has facilitated the growth and diversification of services offered.

Since the move, the company has invested in excess of \$3.5M towards equipment, technology and staff development to remain at the forefront of precision manufacturing trends and best practices.
